

Layered Explainable Agentic Defense System

Team Nexora

1. Hematharaa S
2. Gayathri S

3. Ilakya SL
4. Yogasri M

Problem Statement

Fragmented Detection

Each threat is analysed in isolation, so coordinated attacks go unnoticed

Lack Of Context

Traditional security apps don't connect message, URLs, Calls, Files and apps

No Clear Explanation

Users get generic alerts without understanding why it's risky

Growing Sophistication

Scammers use AI, Deepfakes and multi-channel Campaigns to bypass detection

Today's cybercriminals use multiple channels- SMS , calls, links, files, and apps - to trick users. Each threat looks small on its own, but together, they form a coordinated attack.

Result:
Users remain vulnerable, confused and often fall victim to scams.

Proposed Solution

Monitoring Everything (with Your Permission)

Messages/SMS

Detect scams, phishing, links, suspicious senders

Calls

Analyzes call recordings (for consent)

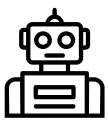

URLs/Links

Checks reputation, redirect, and threat intel

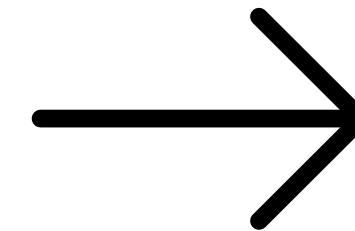

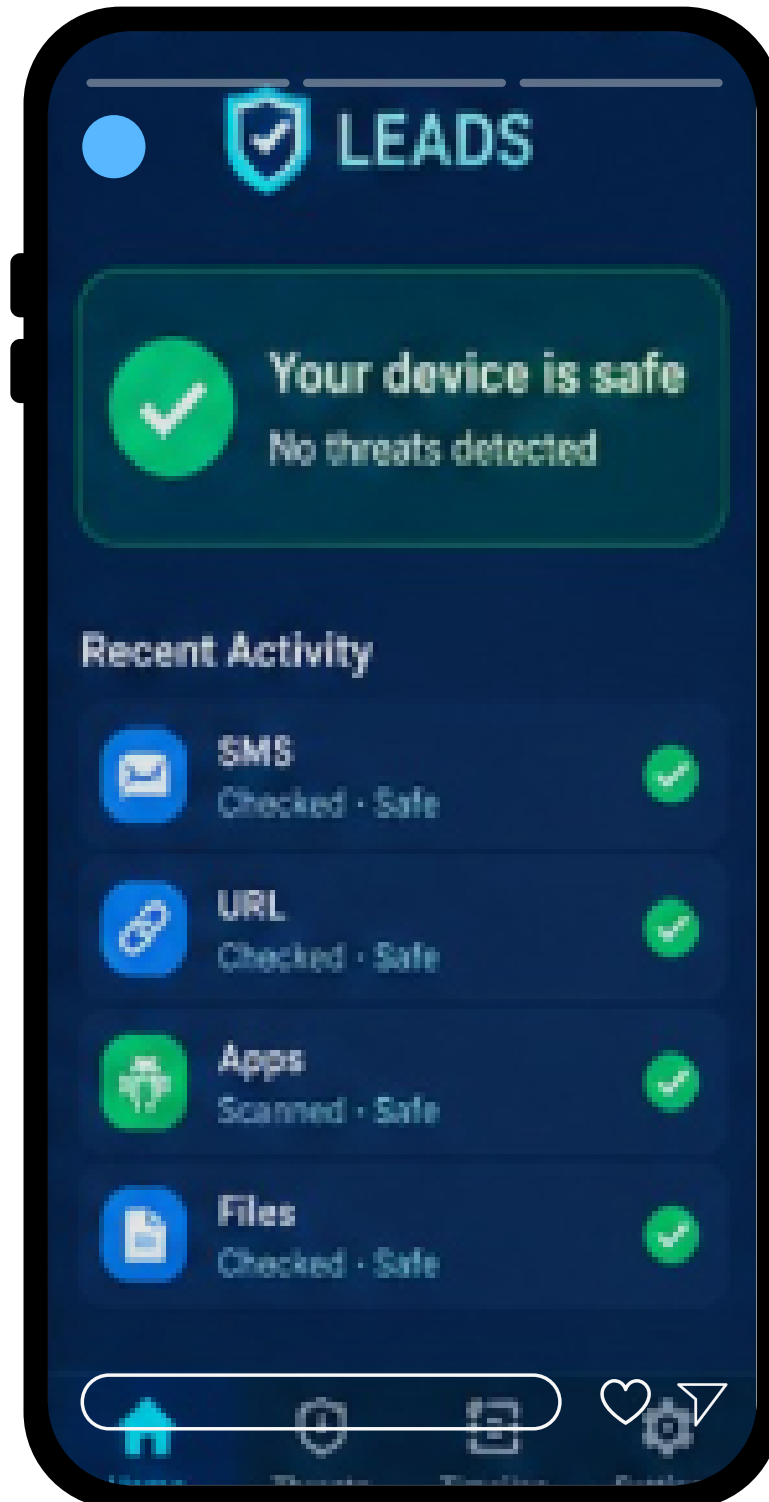

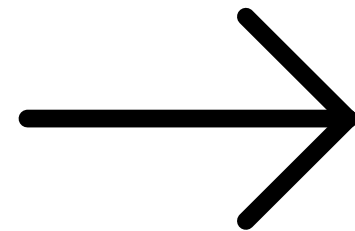

Files/ Downloads

Scans for malware, malicious content

Apps / APKs

Analyzes permissions, behaviour and reputation

AI-Powered Investigation

Specialized Agents

(Message, URL, File, APK, App etc..)

ScamGraph

Connect entities across incidents (people, links, etc.)

Risk Engine

Calculates risk with real-time threat intel

Explainable AI

Tells you why it's risky and what it means

Approach

TECH STACK

Android + Kotlin

Python + FastAPI

Agentic AI

Neo4j / ScamGraph

PostgreSQL

Redis

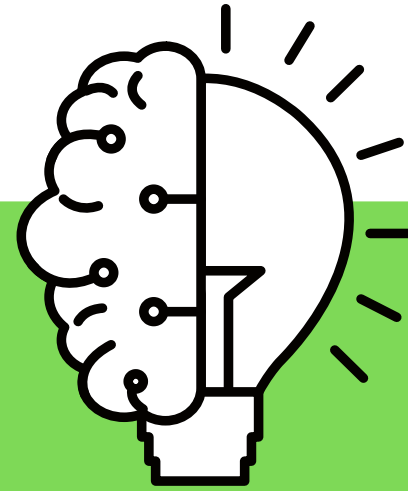

Threat Intelligence APIs

Innovation & Impact

FEATURES

- Multi-channel protection
- AI investigation
- Real-time alerts
- Explainable security
- Protective actions

INNOVATION

- ScamGraph
- Agentic AI
- Cross-channel correlation
- Privacy-first Architecture
- Attack-chain discovery

IMPACT

- Earlier detection
- Better awareness
- Faster response
- Safer users
- Scalable protection
